Abstract. First records for ten species of Elateroidea from Albania, Montenegro and Macedonia are given. Eight species belong to the family Elateridae: *Agriotes acuminatus* (Stephens, 1830), *Athous zebeianus* Platia, 2008, *Procræterus tibialis* (Lacordaire, 1835), *Dalopius marginatus* (Linnaeus, 1758), *Stenagostus rhombeus* (Olivier, 1790), *Hypoganus inunctus* (Lacordaire, 1835), *Zorochros meridionalis* (Laporte, 1840), *Paracardiophorus musculus* (Erichson, 1840), one to Eucnemidae: *Xylophilus testaceus* (Herbst, 1806), and one to Omalisidae: *Omalisus fontisbellaquaei* Geoffroy, 1785.

Keywords: Coleoptera, Elateroidea, Elateridae, Eucnemidae, Omalisidae, Montenegro, Albania, Macedonia, new records, distribution

The superfamily Elateroidea (Coleoptera: Polyphaga) contains ca. 24,000 described species classified into 15 families (Bocak et al. 2014, Kundrata et al. 2014). Although the greatest diversity of the group lies in the tropics, new elateroid species are still being discovered in Europe as well (e.g., Platia 2012, Zapata et al. 2013, Németh & Platia 2014). The Balkan Peninsula is part of the Mediterranean Basin, one of the most important world biodiversity hotspots (Myers et al. 2000), and still, new Elateroidea species, mostly the click-beetles, can be found there (e.g., Schimmel & Platia 2008, Platia & Németh 2011, Platia 2013). Recently, several authors published information on new records of elateroid beetles for the Balkan countries (Kovács & Merkl 2013; Kovács et al. 2011, 2012; Pedroni & Platia 2010; Platia 2011; Platia & Németh 2011).

Herein, we present the new faunistic records for Albania, Montenegro and Macedonia which resulted from the recent Czech and Hungarian collecting expeditions in the Balkan Peninsula. For the information on the distributions of examined elateroid species we used studies of Cate (2004, 2007), Mertlik & Platia (2008) and references cited above. Specimens are deposited in the collections of Václav Dušánek (Zábřeh), Josef Mertlik (Opatovice nad Labem), Robin Kundrata (Olomouc), Petr Brůha (Ústí nad Labem) and in the Coleoptera Collection of the Hungarian Natural History Museum (Budapest).

Abbreviations of the countries follow Cate (2007).

E = Europe, AB = Azerbaijan, AL = Albania, AU = Austria, BE = Belgium, BH = Bosnia and Herzegovina, BU = Bulgaria, BY = Belarus, CR = Croatia, CZ = Czech Republic, DE = Denmark, EN = Estonia, FI = Finland, FR = France, GB = Great Britain, GE = Germany, GG = Georgia, GR = Greece, HU = Hungary, IT = Italy, LA = Latvia, LS =

Liechtenstein, LT = Lithuania, LU = Luxemburg, MC = Macedonia, MD = Moldavia, NL = The Netherlands, NR = Norway, NT = Russia: North European Territory, PL = Poland, RO = Romania, RU = Russia, SK = Slovakia, SL = Slovenia, SP = Spain, SV = Sweden, SZ = Switzerland, UK = Ukraine, YU = Serbia and Montenegro.

Acknowledgements

We would like to thank Giuseppe Platia (Italy) for valuable information and comments on the manuscript and Ottó Merkl (Hungarian Natural History Museum, Budapest) for proof reading. The fieldtrip of D. Angyal, Z. Erőss, Z. Fehér & J. Grego to Albania in June 2014 was financed by the Conchologists of America 2014, Academic Grant and the Austrian Science Fund (FWF P26581-B25).
